

I work in Agriculture, which has a strong weather-related basis in and of itself. I also travel extensively within my occupation, as well as to my historical family home several hundred miles away. Weather information is vital, and the only way I can gain up-to date information while en-route is through my Satellite Radio system. To take it away from me would be to deprive me of a valuable tool.

I beg you to reject NAB's petition 04-160 and any other requestes that would deprive myself and others of the resource that these updates via satellite radio provide.
